with
Manuka honey
MGO 514+
UMF 15+

The herbal complex found in Respirax supports the healthy functioning of the respiratory tract. Ribwort, thyme and ivy act to promote the expulsion frequency of secretion and minimize its accumulation. Thanks to its beneficial qualities, Manuka honey also contributes to the maintenance of a healthy respiratory tract.

Sensory additives (per kg)	Thyme extract (75,000mg), ivy extract (2,000mg)
Technological additives (per kg)	Xanthan gum, potassium sorbate
Instructions	Adjust the feeding quantity on the dosing applicator using the adjustment ring. Respirax can be administered directly into the mouth or mixed with the pet's food.
Daily-recommended dosage	To be fed in the morning and in the evening. Feeding recommendation: 7-14 days
Minimum age: 12 weeks	
< 500g	1 × 0,5ml
500g-1kg	2 × 0,5ml
1-2kg	2 × 1ml
2-3kg	2 × 1,5ml
+ 1kg	+ 2 × 0,5 ml (up to max. 2 × 2,5ml)
Minimum age: 16 weeks	
< 5kg	2 × 2ml
5-10kg	2 × 2,5ml
10-20kg	2 × 3ml
20-30kg	2 × 3,5ml
30-40kg	2 × 4ml
+ 10kg	+ 2 × 0,5ml
Shelf life and expiration information	Do not store unopened above 25°C. Once opened store cool, dry and dark. Use within 3 months.
Note	Do not use during pregnancy and lactation. Do not use if your pet suffers from any heart, kidney, liver or intestinal disorders. Made in Germany.

Ingredients

Manuka honey (MGO 514+)

Manuka honey is extracted by honeybees from the South Sea myrtle (Manuka plant) in New Zealand, where it has been used for many generations. Respirax contains Manuka honey with a particularly high level of methylglyoxal (MGO 514+), a sugar breakdown product that is present in concentrations up to 100 times higher than in conventional honeys. Due to this special natural phenomenon and the associated antibacterial properties, Manuka honey is valued by experts worldwide.

Thyme

The mucyloitic properties of thyme facilitate breathing and strengthen bronchial function. All plant components of the herb are used apart from the root.

Ivy (*Hedera helix*)

Ivy promotes the relaxation of bronchial muscles. Several secondary plant compounds found in ivy leaves, especially α-hederin, stimulate the bronchial mucosa to produce more viscous mucus that is easily discharged.

Ribwort plantain

The mucilage contained in ribwort plantain can form a protective layer on the mucous membranes of the respiratory tract. A variety of secondary plant compounds in ribwort plantain support the healthy functionality of the respiratory tract.
