

Calmin forte

CBD oil (with cannabidiol and L-tryptophan).

Only available at your veterinary practice

Doesn't dwell, gets quickly to the cell. Calmin forte has a high bioavailability being a solubilizate. When solubilizates come in contact with water (saliva or gastric juice), the highly concentrated, dissolved ingredients are encased by fine vesicles – creating a micro-emulsion. In this way, the body can absorb these ingredients better and faster. Due to its mild taste, the acceptance of Calmin forte by cats and dogs is exceptionally high.

Faster in the cells

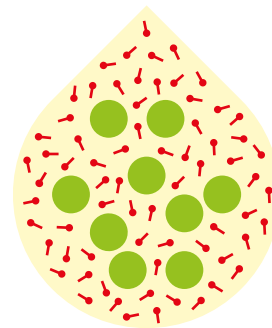

Calmin
forte

Calmin forte is formulated in solubilized form and is characterized by a particularly high bioavailability.

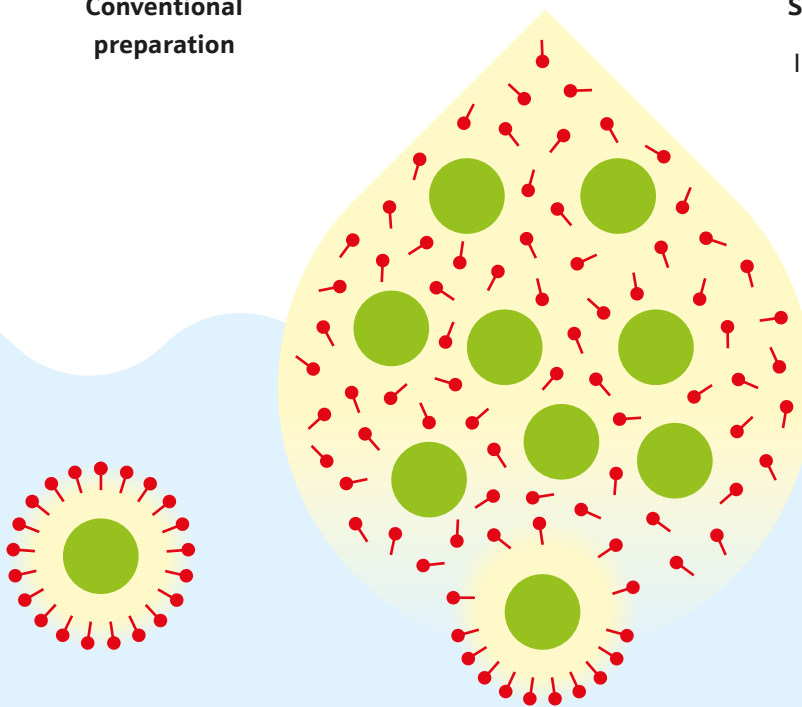

Conventional preparation

Solubilisation >

Solubilized preparation

Ingredients in dissolved form with emulsifiers

Water

When the solubilisate comes into contact with water (saliva or gastric juice), the ingredients are enclosed by emulsifiers – a micro-emulsion is formed.
