

Ibedex

Complementary feed for cats and dogs. Strengthens the microorganisms in the instestine.

Prebiotics can have a positive influence on the microbiome because they provide a good nutritional basis and growth substrate for desirable and positive bacterial strains in the large intestine. The proliferation of these strains leads to a suppression of undesirable (pathogenic) germs thereby inhibiting their spread.

Prebiotics are, in contrast to probiotics, not living bacteria, but indigestible dietary fiber. Thanks to this, they can pass through the stomach and small intestine and enter the large intestine unhindered. Prebiotics also stimulate the intestinal peristalsis. In addition, bile acids and ammonia are bound in the intestine and more effectively excreted, thus helping to relieve the liver and kidneys.

Only available at your
veterinary practice

Contents

150 / 300 / 450g powder

Composition

Apple pectin, inulin (sourced from chicory, Jerusalem artichoke, artichoke or agave), psyllium husks

Analytical components

Crude protein (1.3%), crude ash (0.9%), crude fiber (76.0%), crude fat (<0.1%)

Sensory additives (per kg)

Microcrystalline cellulose (500,000mg)

Daily-recommended dosage

Starting quantity: 0,5-1 level measuring spoon (3ml ▲ approx. 1,6g)

Increase the dosage progressively over one week by 0,5-1 level measuring spoon until the consistency of the faeces corresponds to the veterinarians recommendation.

Maximum daily dosage: 3 level measuring spoons (ca. 5g) per 5 kg body weight.

Instructions

Ibedex can be mixed with the pet's food. Suitable for long-term use.

Provide sufficient water.

Vegan

Sugar-free

Suitable for animals
suffering from allergies

Made in Germany

Ibedex

Strengthens the microorganisms
in the instestine.

Feeding recommendation

Starting quantity: 0.5-1 level measuring spoon*. Increase the dose by 0.5-1 level measuring spoon per day until the desired consistency of the faeces, as recommended by your veterinarian, has been achieved. Important: Increase the daily dosage only up to the maximum recommended amount corresponding to your pet's weight.

Maximum amount per kg body weight

5kg	=	3 	20kg	=	12 
10kg	=	6 	25kg	=	15 
15kg	=	9 	30kg	=	18

1 Ouch!

Singular, dry and hard chunks. Difficult to excrete.

2 Dry.

Clumpy, sausage shaped. Does not leave traces when picked up.

3 Well formed.

Slightly sticky. Leaves very few traces when picked up.

4 Also okay.

Soft consistency. Leaves traces when picked up.

5 Squishy.

Squishy, soggy consistency with a few firmer droppings.

6 Oh Shit!

Watery and formless. Popularly known as "splatter-itis".
